## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114 was filed in this application after appeal to the Board of Patent Appeals and Interferences, but prior to a decision on the appeal. Since this application is eligible for continued examination under 37 CFR 1.114 and the fee set forth in 37 CFR 1.17(e) has been timely paid, the appeal has been withdrawn pursuant to 37 CFR 1.114 and prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 07/22/2008 has been entered.

### ***Status of Claims***

2. Claims 1-24 and 26-38 are cancelled. Claim 25 is pending and under examination.

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 25 is rejected under 35 U.S.C. 103(a) as being unpatentable over Krieg,

A.<sup>1</sup>

---

<sup>1</sup> Krieg et al. WO 00/06588, published 02/10/2000.

The claim is directed at a method for modulating the immunostimulatory effect of an immunostimulatory oligonucleotide compound by introducing a nucleoside methylphosphonate.

Krieg et al. teaches immunostimulatory oligonucleotides. Krieg et al. also suggests the substitution of the natural phosphodiester backbone that links nucleosides with methylphosphonate to stabilize the oligonucleotides. [Page 13, in particular.] Thus, at the time the invention was made, it would have been prima facie obvious for one of ordinary skill in the art to substitute the natural phosphodiester backbone that links nucleosides with methylphosphonate. One of ordinary skill in the art, at the time the invention was made would have been motivated to do so to stabilize the oligonucleotide. One of ordinary skill in the art, at the time the invention was made, would have had a reasonable expectation of success for doing so the use of alternative backbones is routinely practiced in the art.

### ***Conclusion***
